

Building a nest dispenser

1

Find a stick to serve as a base for your dispenser.

2

Wrap some wide netting to form a bag around the stick. Secure one end with string.

3

Fill the netting with all sorts of material that you think can be used for nesting*. Make sure all material can pass easily through the mesh.

You may use pet or animal fur as long as shampoos or flea products have not been used on it.

4

Once filled, tie the other end of the netting with string to the stick.

Place your nest dispenser somewhere in the open where birds can see it and can land safely to pull bits of material.
