

Make a mini display module

A

B

C

Here's how

- 1 Find a large cardboard box (A).
- 2 Open it carefully and lay it flat out (B).
- 3 Remove the top and bottom flaps, leaving the four adjacent sides.
- 4 Fold the sides like a concertina (C) or any desired shape.
- 5 Use the sides to display the photographs, as in the diagram above.

Using several of these free-standing modules you can mount an exhibition with multiple topics. The modules are versatile and can be set up in many ways on tables around a room, creating a wonderful display.
